- TSPD (thyristor surge protection device) (crowbar device)
 - ST (Trisil)
 - TOOHONG
 - Bourns (TISP)
 - Littelfuse (SIDACtor)
- transient voltage suppression diodes
 - Transil

Trisil is a trade name for a thyristor surge protection device, an electronic component designed to protect electronic circuits from overvoltage. Unlike a transient voltage suppression diodes, such as Transil, Trisil acts as a crowbar device, switching on when the voltage across it exceeds its breakover voltage.
